

Question 1

LevelOrderTraversal(tree):

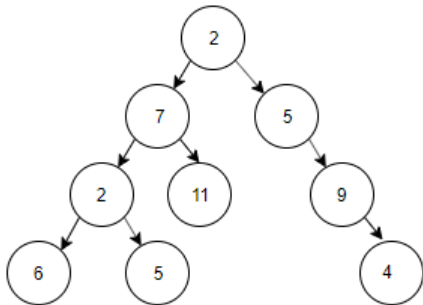

```
if tree == nil:  
    return
```

```
Queue q  
q.Enqueue(tree)
```

```
while not q.Empty():  
    node = q.Dequeue()  
    Print(node.value)
```

```
if node.left != nil:  
    q.Enqueue(node.left)
```

```
if node.right != nil:  
    q.Enqueue(node.right)
```

1.implement the level-order traversal (breadth-first traversal) using the pseudocode provided above. Your function should print the nodes of the tree in level-order.
